Celebrate Constitution Day:
The 4th Amendment and privacy, transparency and security

Tuesday, September 17, 5:30 pm
Toyota Auditorium

Join our illustrious panel as we take a look at the 4th Amendment and issues of privacy, transparency, and national and global security. In today’s world of instant communication, surveillance cameras, data mining, YouTube, etc., these issues have become contentious topics. Our unique panel of four very different professors will review these issues and the impact it has on their field and daily lives.

UT Law professor and creator of Instapundit.com, Glenn Reynolds, will lead the discussion with a brief overview of the 4th, moving quickly to the main discussion of privacy and transparency.

Suzi Allard, Associate Professor, UT Information Sciences, will discuss the impact on her field of information science.

Michael W. Berry, Professor, UT Electrical Engineering & Computer Science and Director, Center for Intelligent Systems & Machine Learning, will discuss data mining.

Brandon Prins, Professor, UT Political Science, will discuss these issues from a global and national security perspective.
